

*María Luque holds two MSc in Engineering and in Architecture. She has worked for more than 15 years in different industrial sectors as well as big science facilities. After a period in medium size companies, she worked as a Project Engineer in an international company dedicated to the construction of huge industrial plants. These experiences led her to work at CERN, in Switzerland. There, she managed the design, manufacturing and installation of several components intended to upgrade the Large Hadron Collider (LHC) into the High Luminosity LHC. Today, she is working on the IFMIF-DONES Safety team, specifically on the Licensing and Permitting processes for the activities that will soon start at the facility.*
